CHARACTER CARDS

## CHARACTER CARDS

This is a set of cards to familiarize learners with the 4 characters. Each player gets 6 or 7 cards and tries to match the card that is opened first. The picture of all four characters is used as a joker, with the player who casts it deciding on the character that is selected for the next player. The first player to remain with no cards in his or her hand is the winner.

Given that a pack of cards has 52 cards print each character' s card 12 times ( $4 \times 12 = 48$ ) and the joker(the card depicting all the characters together) 2 times ( $2 \text{ cards} \times 2 = 4$ ).
